USA Booth 718

Exhibiting: Rockford Manufacturing Group, Fastener Engineers and Lewis Machine are innovative leaders in the wire industry. The company's integrated in-line wire processing solutions are the epitome of lean manufacturing. Customers quickly realize reduced inventory, improved productivity, greater flexibility and most importantly, reduced total cost. The company's in-line wire processing equipment is being used by many manufacturing

processes including fastener production, nail making, wire bending, concrete products, steel bar processing, welded wire products, screw machine parts and wire straighten and cutting. RMG provides integrated systems for the processing of hot-rolled rod into descaled and drawn wire that is regularly used in a variety of production machines and processes to reduce material cost. Lewis Machine straightening and cutting equipment has been serving the wire industry for 100 years. RMG straighten and cut machines have introduced many revolutionary concepts including VF AC drives, three die arbors and its patented "Clutchless" cutting technology. For service and support, RMG is the only OEM for Fastener Engineers, Lewis Machine and G.C. Patterson equipment and the best source for all tooling, spare parts and technical service requirements. Attendees can tour the company's state of the art manufacturing facility at www.rmgfelm.com.

Personnel: Kirk Snyder, Kirk Prosser.
