

RMG Autodraw II Spacesaver Wire Drawers Continue Sales Surge

RMG's patented Autodraw II Spacesaver designs continue to sell well in both Europe and in the USA. Customers with limited shop floor space have been able to take advantage of in-line wire drawing. A Spanish customer who wasn't previously drawing material is now saving 60 Euro per coil with the Spacesaver. Other customers using conventional in-line wire drawers have now switched to Spacesavers, finding that the additional floor space has allowed them to add new header lines in the same building footprint. The Autodraw II Spacesaver is another example of RMG's commitment to putting the customer first, by listening to the unique issues each customer faces and working together to achieve our customers' goals. The Autodraw II Spacesaver models continue the RMG tradition of ergonomic design configurations for operator safety, quality components and craftsmanship. The product line has a diameter range from 2mm to 16mm.
