INTERWIRE TRADE EXPOSITION

INTERWIRE - ATLANTA, GA. May 11 – 13, 2021

Rockford Manufacturing Group (RMG), Fastener Engineers and Lewis Machine are leaders in the wire industry. Our integrated In-Line Wire Processing Solutions are the definition of Lean Manufacturing. Customers realize reduced inventory, improved productivity, greater flexibility and reduced total cost.

Our straighten and cut machines are used by virtually every wire products company in North America.

Stop by our Booth 1707 to discuss our Lewis SYNCHRO/CUT line of machines. This machine addresses applications where tighter control of wire diameter, reduced work hardening and less wire marking are critical to the final product. We have developed a novel moving shear machine by leveraging our years of experience with the Lewis Machine product line.
